

Custom Solution

We do not sell a finished product. AIM Team individually approaches each client because everyone has their own, unique style of doing business. Preliminary we conduct business analysis to find how interdependent the departments are, assessing current complexities and internal workflows. After acquiring information, AIM team will produce a hosted platform with integration of your business processes.

Platform Designed To

Provide Real-Time Data

Heads of the organization can remotely view the activity of their business through a mobile application. To see the costs and profit, approve bills for payment, view the attendance of employees and the current workload of the staff.

Keep Trackable Statistic

The AIM platform keeps complete statistics on all activities. Saves the history of work performed, projects, and orders. At any time, you can open the history and see how the work went through, find out at what stage the current project is in, see if the delays and problems have occurred.

Streamline Your Business

The AIM platform is a complete solution for business automation. All departments of the enterprise including data are centralized, this avoids double work in departments and saves time and corporate funds.

Platform designed to Automate your Business Operation.

What is AIM?

AIM is the business operation platform that allows to digitize and connect every process of your company in the single console. With AIM, you can run all aspects of your business through secure, multi-level management modules that can be purchased and shifted based on your business needs. It does not matter what business line you take, how big or small you are; AIM can provide you with the functionality modules you need to fully understand your business run in the real time.

Similar to most popular program SAP, AIM comes with the number of benefits and simplifications during the implementation stage as well as day to day operation.

Key Benefits

Automation of all departments of the enterprise into a single workflow platform.

- ✓ AIM can be provisioned through on-prem installation or online-hosting implementation.
- ✓ AIM can be integrated with the ERP, HR and CRM systems through API integration.
- ✓ AIM platform comes with Multi-Level Management module as a build in feature.
- ✓ AIM platform comes with the Mobile App that allows accessing any level of the portal depending on the access rights.
- ✓ AIM can be integrated with your Active Directory and support SSO implementation.
- ✓ Fast Deployment, average 2 months
